## **Bus Reservation System**

### **Team-2 Members**

Name	Role
Ankit Ghosh	Teamlead,UI,API,
	DB
JSL Prathyusha	WEB API,DB,UI
Pradyumna Biswal	UI,DB
Preeti Saha	DB,DAL
Asha HB	DB,DAL
Suraksha P	DAL,DB
Akanksha Bandi	DAL

### **Technology Used:**

- ❖ Asp.Net Core MVC
- ❖ Database- SQL
- ❖ EF Framework- Databased Approach
- ❖ Asp.Net Core Web API

#### **Modules:**

- Admin Module
- User Module

#### **Admin Module: Features:**

- Login/Logout
- Crud Operation on Bus-Add/Search/Edit/Delete
- ❖ Admin Dashboard- Bus details report, booking report, Route details, Add bus.

### **User Module: Features:**

- \* Registration & Login Module
- ❖ User Dashboard-Home, Contact us, Search bus.
- ❖ Search for availability of the Bus and Select Bus.
- ❖ Book your seat and boarding point.
- ❖ Payment Module.
- Download Ticket.

## **Database Overview:**

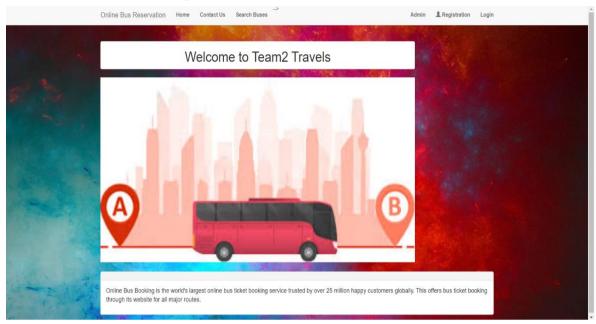

# **Project Task Done by Teammates**

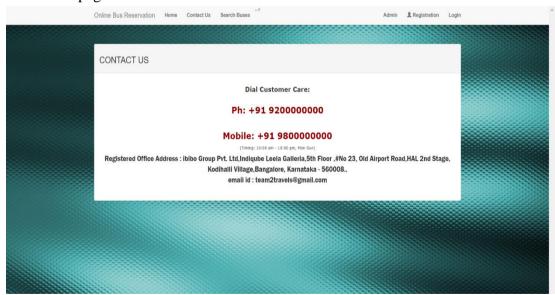

Name	Task
Ankit Ghosh	Database design inspection
	UI design flow and plan
	❖ UI design
	❖ Web API
	UI design changes
J S L Prathyusha	❖ ER diagram
	Insert values to database
	❖ Working on MVC architecture
	❖ Web API
	Ul design changes
Pradyumna Biswal	Database design inspection
	UI design flow and plan
	UI design, work and changes
Preeti Saha	Building of basic structure of database.
	Building of database tables
	Final shape of database
	Working on MVC architecture
	❖ Stored Procedure
	Ul design changes
Asha H B	Building of basic structure of database.
	Building of database tables
	Final shape of database
	Working on MVC architecture
	Stored Procedure
	Ul design changes
Suraksha P	❖ ER diagram
	Insert values to database
	Working of DB first approach
	Working on MVC architecture
	Ul design changes
Akanksha Bandi	❖ ER diagram
	Insert values to database
	Working of DB first approach
	❖ Working on MVC architecture
	Ul design changes

### **Project Highlights:**

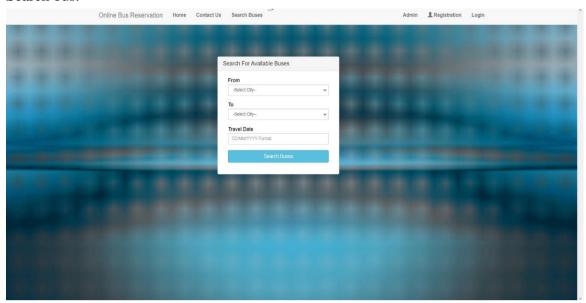

### **❖** Home screen Page:

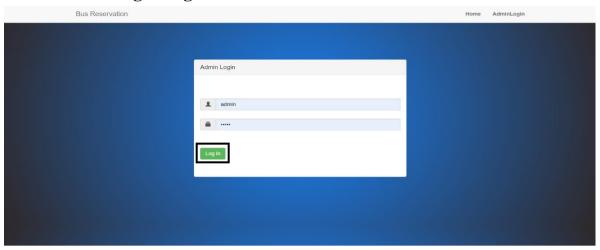

- This is the default home screen page showing the name of the travel agency and from here we can access to: -
- \* Contact us page:

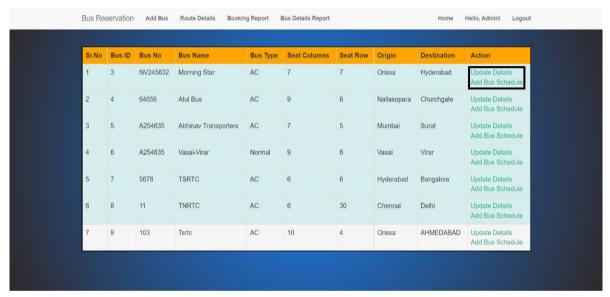

### Search bus:

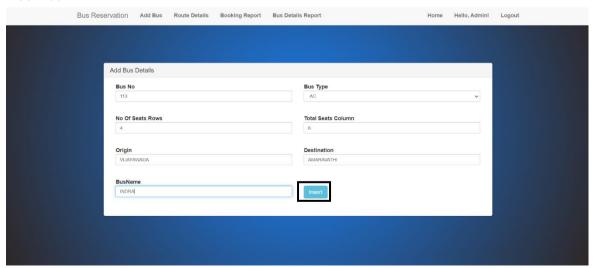

### **Admin Login Page:**

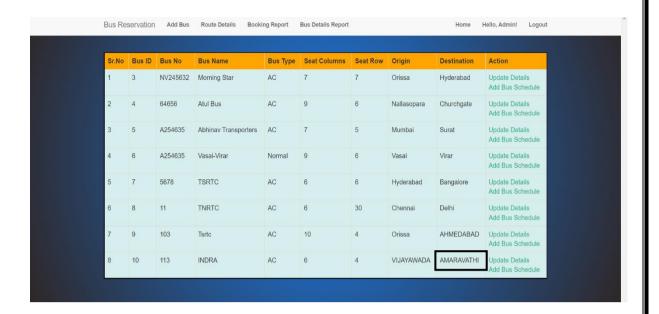

❖ After the Admin credentials are authorized, the Admin redirected to the Admin homepage and from the Action field he can Update Details of Bus and Add Bus Schedule, as shown below.

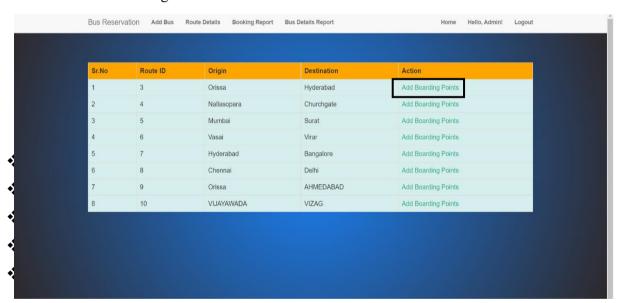

- ❖ Admin can do several things like:-
- ❖ Add Bus

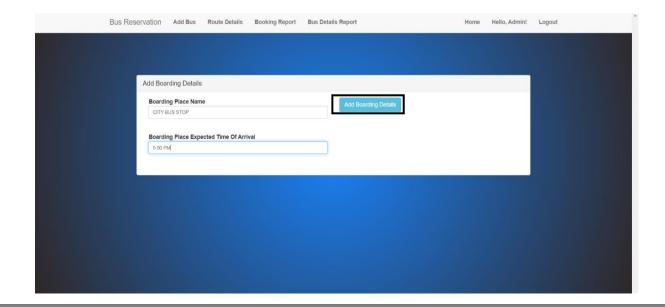

#### \* Route Details

### ➤ Add Boarding Details

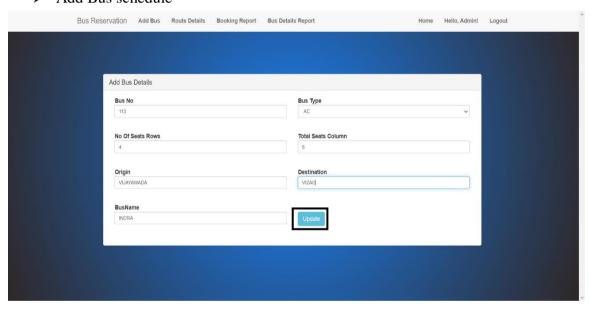

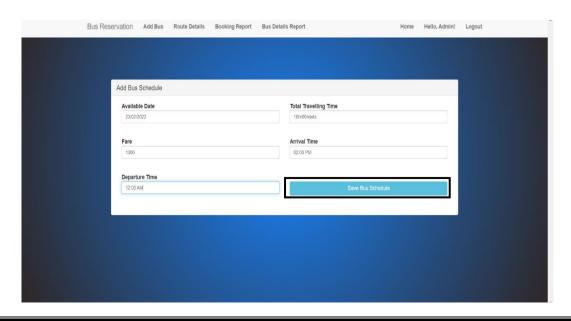

#### Booking Report

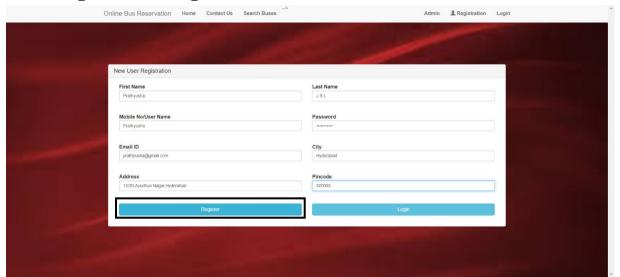

### ❖ Bus Details Report

- ➤ Update Details
- ➤ Add Bus schedule

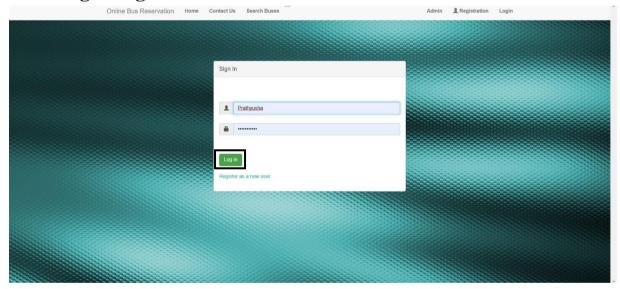

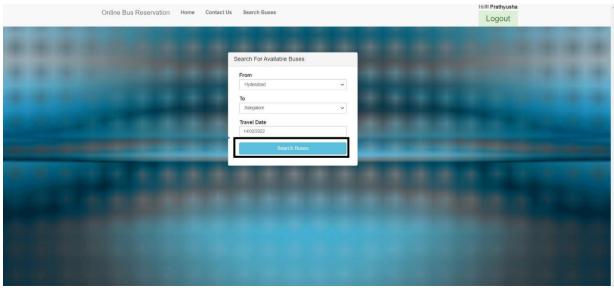

## **User Registration Page:**

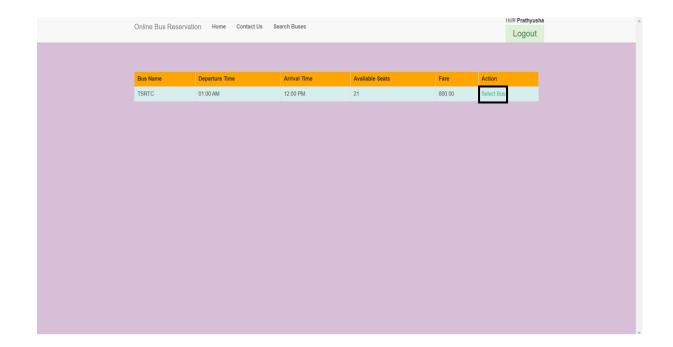

## **User Login Page:**

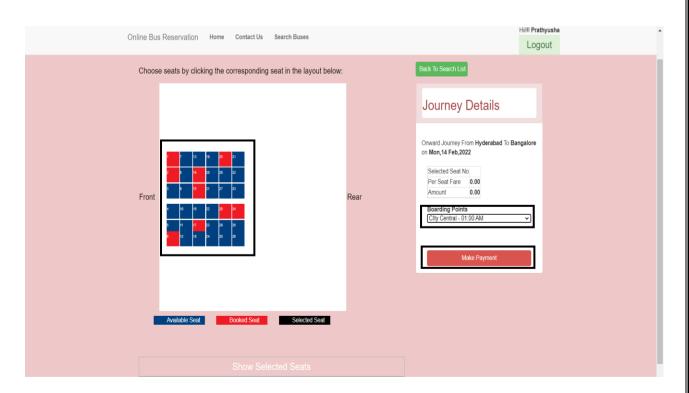

## Search Bus Availability:

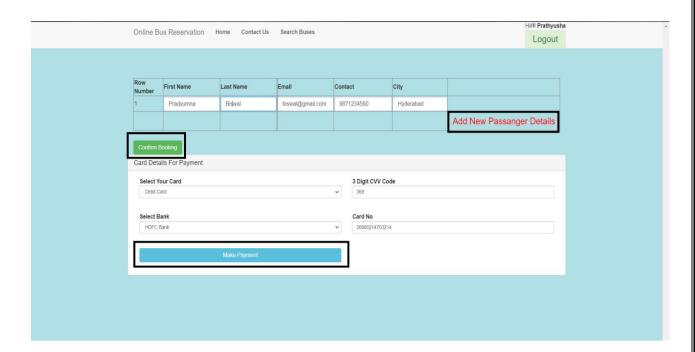

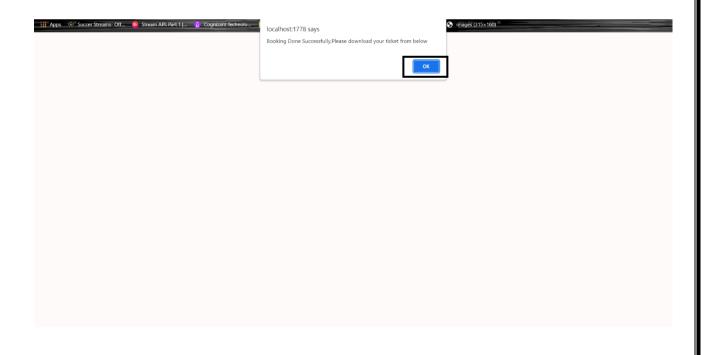

## **Selection of Seat and selection of Boarding point:**

## Confirming the passenger's details and making payment:

## **Confirmation message for booked ticket:**

### Final booking report:

#### **Downloaded ticket:**

### **Admin Login Code:**

```
namespace BusBookingProject.Admin
  public partial class AdminLogin:
System.Web.UI.Page
    protected void Page_Load(object sender,
EventArgs e)
    protected void btnLogin_Click(object
sender, EventArgs e)
      if(txtUserId.Text=="admin" &&
txtPassword.Text=="admin")
         Session["UserName"] = "Admin";
Response.Redirect("BusDetailsReport.aspx");
       else
ScriptManager.RegisterClientScriptBlock(this,
this.GetType(), "alertMessage",
"alert('Username and password is incorrect
please enter valid credentials')", true);
```

### **\*** User Login Code:

```
public partial class Login: System. Web. UI. Page
                              #region Global Variable
                SqlConnection connString = new
SqlConnection (Configuration Manager. Connection Strings ["Online Bus Booking Connec
nectionString"].ToString());
               #endregion
                protected void Page_Load(object sender, EventArgs e)
                private DataSet getUserData()
                        DataSet dsGetData = new DataSet();
                        SqlCommand sqlCmd = new SqlCommand();
                        if(connString.State==ConnectionState.Closed)
                                connString.Open();
                        sqlCmd.CommandType = CommandType.StoredProcedure;
                        sqlCmd.Parameters.AddWithValue("@MobileNo",
Convert.ToString(txtUserId.Text));
sqlCmd.Parameters.AddWithValue("@Password",Convert.ToString(txtPassword.T
ext));
                        sqlCmd.CommandText = "ispUserLogin";
                        sqlCmd.Connection = connString;
                        SqlDataAdapter sda = new SqlDataAdapter(sqlCmd);
                        sda.Fill(dsGetData);
                        return dsGetData;
```

#### **User Registration Code:**

```
private int Regitration()
{
 try
    int ResultCout = 0;
    SqlCommand sqlCmd = new SqlCommand();
    if (connString.State == ConnectionState.Closed)
      connString.Open();
    sqlCmd.CommandType = CommandType.StoredProcedure;
    sqlCmd.Parameters.AddWithValue("@FName", Convert.ToString(txtFirstName.Text));
    sqlCmd.Parameters.AddWithValue("@LName", Convert.ToString(txtLastName.Text));
    sqlCmd.Parameters.AddWithValue("@EmailId", Convert.ToString(txtEmailID.Text));
    sqlCmd.Parameters.AddWithValue("@Address", Convert.ToString(txtAddress.Text));
    sqlCmd.Parameters.AddWithValue("@City", Convert.ToString(txtCity.Text));
    sqlCmd.Parameters.AddWithValue("@PinCode", Convert.ToString(txtPincode.Text));
    sqlCmd.Parameters.AddWithValue("@ContactNo",
   Convert.ToString(txtMobileNo.Text));
    sqlCmd.Parameters.AddWithValue("@Password", Convert.ToString(txtPassword.Text));
    sqlCmd.Parameters.AddWithValue("@Ret_Val", SqlDbType.BigInt);
    sqlCmd.Parameters["@Ret Val"].Direction = ParameterDirection.Output;
    sqlCmd.CommandText = "ispUserRegistration";
    sqlCmd.Connection = connString;
    sqlCmd.ExecuteNonQuery();
    ResultCout = Convert.ToInt32(sqlCmd.Parameters["@Ret_Val"].Value);
    return ResultCout:
  catch (Exception ex)
    throw;
```

#### **Adding Bus Code:**

```
private int AddBusDetails()
  int ResultCout = 0;
  SqlCommand sqlCmd = new SqlCommand();
  if (connString.State == ConnectionState.Closed)
     connString.Open();
  sqlCmd.CommandType = CommandType.StoredProcedure;
  sqlCmd.Parameters.AddWithValue("@BusNo", Convert.ToString(txtBusNo.Text));
  sqlCmd.Parameters.AddWithValue("@BusName", Convert.ToString(txtBusName.Text));
  sqlCmd.Parameters.AddWithValue("@BustType",
  Convert.ToString(ddlBusType.SelectedItem.Text));
  sqlCmd.Parameters.AddWithValue("@SeatColumn",
  Convert.ToInt32(txtSeatColumn.Text));
  sqlCmd.Parameters.AddWithValue("@SeatRow", Convert.ToInt32(txtSeatRows.Text));
  sqlCmd.Parameters.AddWithValue("@Origin", Convert.ToString(txtOrigin.Text));
  sqlCmd.Parameters.AddWithValue("@Destination",
  Convert.ToString(txtDetination.Text));
  sqlCmd.CommandText = "ispAddBusDetails";
  sqlCmd.Connection = connString;
  ResultCout = sqlCmd.ExecuteNonQuery();;
  return ResultCout;
```

### **Updating Bus Code:**

```
private int UpdateData()
 int ResultCout = 0;
 SqlCommand sqlCmd = new SqlCommand();
 if (connString.State == ConnectionState.Closed)
   connString.Open();
 sqlCmd.CommandType = CommandType.StoredProcedure;
 sqlCmd.Parameters.AddWithValue("@BusID",
Convert.ToInt32(Request.QueryString["BusID"]));
 sqlCmd.Parameters.AddWithValue("@BusNo", Convert.ToString(txtBusNo.Text));
 sqlCmd.Parameters.AddWithValue("@BusName",
Convert.ToString(txtBusName.Text));
 sqlCmd.Parameters.AddWithValue("@BusType",
Convert.ToString(ddlBusType.SelectedItem.Text));
 sqlCmd.Parameters.AddWithValue("@seatColumn",
Convert.ToInt32(txtSeatColumn.Text));
 sqlCmd.Parameters.AddWithValue("@SeatRow",
Convert.ToInt32(txtSeatRows.Text));
 sqlCmd.Parameters.AddWithValue("@Origin", Convert.ToString(txtOrigin.Text));
 sqlCmd.Parameters.AddWithValue("@Destination",
Convert.ToString(txtDetination.Text));
 sqlCmd.CommandText = "ispUpdateBusData";
 sqlCmd.Connection = connString;
 ResultCout = sqlCmd.ExecuteNonQuery();;
 return ResultCout;
```

#### **Search Bus Code:**

```
private void bindSearchDetails()
 DataSet dsGetData = new DataSet();
 SqlCommand sqlCmd = new SqlCommand();
 if (connString.State == ConnectionState.Closed)
   connString.Open();
 sqlCmd.CommandType = CommandType.StoredProcedure;
sqlCmd.Parameters.AddWithValue("@Origin",Convert.ToString(Request.QueryString["Or
igin"]));
 sqlCmd.Parameters.AddWithValue("@Destination",
Convert.ToString(Request.QueryString["Destination"]));
sqlCmd.Parameters.AddWithValue("@TravelDate",Convert.ToString(Request.QueryString
["TravelDate"]));
 sqlCmd.CommandText = "ispGetAvailableBusDetails";
 sqlCmd.Connection = connString;
 SqlDataAdapter sda = new SqlDataAdapter(sqlCmd);
 sda.Fill(dsGetData);
 if(dsGetData.Tables[0].Rows.Count>0)
   hlinkSearch.Visible = false;
   gvBusDetails.DataSource = dsGetData.Tables[0];
   gvBusDetails.DataBind();
 }
 else
   ScriptManager.RegisterClientScriptBlock(this, this.GetType(), "alertMessage",
 "alert('Trip not available, Please search again with different date')", true);
   hlinkSearch.Visible = true;
 }}
```

```
Booked seat Code:
  private DataTable getBookedSeat()
  DataTable dt = new DataTable();
  SqlCommand sqlCmd = new SqlCommand();
  if (connString.State == ConnectionState.Closed)
    connString.Open();
  sqlCmd.CommandType = CommandType.StoredProcedure;
  sqlCmd.Parameters.AddWithValue("@BusID",
  Convert.ToInt32(Request.OueryString["BusID"]));
  sqlCmd.Parameters.AddWithValue("@TravelDate",
  Convert.ToString(Request.QueryString["TravelDate"]));
  sqlCmd.CommandText = "ispGetBookedSeatNo";
  sqlCmd.Connection = connString;
  SqlDataAdapter sda = new SqlDataAdapter(sqlCmd);
  sda.Fill(dt);
 return dt;
Making payment:
 private void addCardDetails()
  string newFare = Convert.ToString(Request.QueryString["Fare"]);
  string[] fareArray = newFare.Split(',').Select(str => str.Trim()).ToArray();
  decimal amount=0:
  for(int i=0;i<fareArray.Length;i++)
    amount+=Convert.ToDecimal(fareArray[i]);
  SqlCommand sqlCmd = new SqlCommand();
  if (connString.State == ConnectionState.Closed)
    connString.Open();
  sqlCmd.CommandType = CommandType.StoredProcedure;
  sqlCmd.Parameters.AddWithValue("@UserID",Convert.ToInt32(Session["UserID"]));
  sqlCmd.Parameters.AddWithValue("@CardType",
  Convert.ToString(ddlCardType.SelectedItem.Text));
  sqlCmd.Parameters.AddWithValue("@BankName",
  Convert.ToString(ddlBank.SelectedItem.Text));
  sqlCmd.Parameters.AddWithValue("@CVVNo", Convert.ToString(txtCode.Text));
  sqlCmd.Parameters.AddWithValue("@CardNo", Convert.ToString(txtCardNo.Text));
  sqlCmd.Parameters.AddWithValue("@TotalAmount", Convert.ToDecimal(amount));
  sqlCmd.CommandText = "ispAddCardDetails";
  sqlCmd.Connection = connString;
  sqlCmd.ExecuteNonQuery();
```
